Not all pollution is intentional
We all need to do our part to protect local waterways from pollution. What you may not realize is how much water pollution is unintentional, caused by the things that we do everyday — at work, at home, at play.

Clean water – we need it to survive
Rivers, streams, creeks, ponds, lakes, reservoirs — the metro area’s waterways are some of our most precious resources. They provide drinking water, recreation, and wildlife habitat. But only if the water remains clean and unpolluted.

This brochure offers ways to handle household chemicals and waste that will help prevent water pollution and keep our streams, rivers, and lakes clear and clean.

What you do makes a difference!
You might not think that you can help solve the problem, but you can! The average home can accumulate as much as 100 pounds of chemical wastes each year — from common household and lawn and garden products such as:

- Paint
- Paint thinners
- Cleaning solutions
- Degreasers
- Pesticides
- Weed killers
- Fertilizers
- Antifreeze
- Motor oil
- Gasoline

Look for alternatives
Use non-toxic products
Ask retail experts about non-toxic or less toxic alternatives to your current cleaning, automotive, and lawn care products. Consider using basic products like vinegar, ammonia, and baking soda for your cleaning needs.

Read product labels
Avoid products labeled “Danger” or “Poison.” Products labeled “Warning” or “Caution” are less hazardous.

Use commercial car washes
Instead of washing your car in the driveway, use your local car wash. Commercial car washes collect and filter out dirt, soap, and oil. The wash water is then cleaned and recycled.
Conserve and recycle

Buy only what you need
Avoid creating waste. Buy only the amounts that you will use right away.

Recycle
Take old or unwanted household chemicals to your local recycling centers (where available). Take advantage of local household chemical round-ups. If you change your own oil, collect all of the used oil and take it to your local oil recycling center.

Buy recycled products
Look for recycled paint, motor oil, and antifreeze.

Use and dispose of chemicals properly

Never mix chemicals
Don’t mix different household chemicals together. The mixture might be harmful or toxic.

Store products safely
Store products in their original, labeled containers in a covered and secure area, away from children and pets.

Dispose of chemicals properly
Take responsibility for chemicals that you throw away. Rinse paint brushes in the sink rather than outdoors with a hose. Never pour household, automotive, or lawn and garden chemicals into the storm drains — it’s illegal and it pollutes the water. For additional information on proper disposal, call the number on this brochure.

Contain yard, household, and pet waste

Keep garbage in its place
Keep garbage cans tightly covered. To avoid litter, take garbage and recyclables out to your curb only on the day your trash is picked up.

Manage yard wastes
Keep leaves, grass clippings, and other yard wastes cleared off driveways, sidewalks, and streets, so that they won’t wash into storm drains.

Bag pet wastes
Pet wastes carry disease-causing organisms! Pick up after your pet. Bag pet wastes and dispose of properly in the garbage.

Remember...

Water runs downhill.
Water picks up everything.
Water flows to our rivers, streams, and creeks.

Do your part to keep our water clean!
Dumping liquid or solid waste into a storm drain or creek is a crime! If you see illegal dumping, report it.
