III. Introduction

We have studied the beneficial use of Littleton/Englewood (L/E) biosolids since 1982 at East and West Bennett, 1988 at KIowa, 1993 at North Bennett, and 1999 at Byers. We lost the East Bennett plots in 1993 due to a shift from dryland to irrigated agriculture and the last of the West Bennett sites to development in 2005. We ceased research at the KIowa location in 2007. We will present the proposed research and associated budget separately for three studies (North Bennett, Microbial study, and Byers) and then present the total budget for our proposed research.

IV. Bennett Study Site

North Bennett

We initiated the North Bennett experimental location to replace the East Bennett plots that we lost in 1993. Our former cooperating farmer at East Bennett, Kevin Helzer, decided to grow irrigated crops on our study sites in 1993. We also changed the experimental approach at North Bennett to focus on determining the N equivalency of L/E biosolids associated with repeated applications in a dryland wheat summer-fallow agroecosystem. We will complete harvest soil and biomass sampling and analyses; however, we plan to grow proso millet (Panicum miliaceum L.) or sunflowers (Helianthus annus, L.) to help control an infestation of jointed goat grass (Aegilops cylindrica Host).

We have added Ba, Be, and Mn to our plant and soil analyses since USEPA has identified them as potential pollutants to the CFR503 regulations. Although Ag has also been added to the CFR503 regulations, Colorado State University instrumentation utilized to detect Ag has been less than adequate. Therefore, at this point in time we will not analyze plants and soils for Ag.
A. Objectives for the Bennett study sites (North Bennett)

The objectives of the Bennett study are:

1. To quantify the N equivalency of repeated biosolids application under field conditions compared with commercial N fertilizer at our North Bennett plots.

2. To study the long-term effects of L/E biosolids on soil accumulation and wheat uptake of Ba, Be, Cd, Cr, Cu, Mn, Ni, Pb, Mo, and Zn.

3. To study the long-term effects of L/E biosolids on As, Hg, and Se levels in soil and grain in the 0, 2, and 5 dry tons/acre plots for the North Bennett site. Samples will consist of a composite of all replications for each rate for grain analyses. This gives three grain samples. We also will composite separately the 0-20 and 20-60-cm soil samples from the same plots as the grain samples. This will provide us a total of six soil samples to analyze for each site.

4. To determine the accumulated NO₃-N levels to a depth of 180 cm (6 feet) associated with repeated application of various N fertilizer or sewage biosolids at our North Bennett plots.

5. To determine the carryover effects of biosolids and N fertilizer on introduction of proso millet (*Panicum miliaceum* L.) or sunflowers (*Helianthus annus*, L.) into the wheat-fallow rotation. This change is required to control the noxious weed jointed goat grass (*Aegilops cylindrica* Host). Since jointed goat grass has a life cycle that is similar to winter wheat, about the only control option is to add a crop to the rotation that has a different life cycle. Once the jointed goat grass is controlled, we tentatively plan to return to the wheat-fallow rotation.

V. Microbial Study (To Replace the Phosphorus Study)

A. Introduction

Most biosolids land-application studies focus on risk assessment of potential problems associated with contamination of soils and water with heavy metals, pathogens, personal care products, flame retardants, etc. Other than studies regarding soil fertility status and crop production, studies which test hypotheses of biosolids as beneficial soil amendments are scarce. It is surprising that few scientists have sought to quantify the environmental benefits of biosolids land application, given that many studies have found little or no harmful effects of biosolids when land applied at agronomic rates.

A novel laboratory incubation study to examine the effects of a biosolids amendment on soil microbial-faunal interactions is proposed. Of the soil fauna, the study will focus on Enchytraeidae worms because their members have diverse feeding strategies (bacteria, fungi, and soil organic matter), and because they are known to affect dissolved organic carbon production and reservoirs in soil. This is important because the production of available dissolved organic carbon is the rate-limiting step in microbial nitrogen mineralization-immobilization processes in a newly developed soil N biogeochemical model. The objectives for this study are to determine:

1) if enchytraeid worm populations increase in response to biosolids amendment,
2) if the worms selectively graze on biosolids material or on bacteria due to increased bacterial biomass in biosolids-amended soil,
3) if biosolids amendment results in increased soil dissolved organic carbon concentrations due to enhanced microbial-faunal interactions,
4) whether these interactions ultimately lead to greater N mineralization rates in soil. The hypothesis is that biosolids amendment to soil will increase enchytraeid trophic interactions with soil bacteria, resulting in greater release of dissolved organic carbon and mineral N into soil.

VI. Byers Study Site

A. Introduction

With the establishment of the L/E Byers biosolids-application site, we are developing some practical, never-done-before research. No-till and minimum tillage management is increasing in popularity in eastern Colorado because it improves water conservation and allows more intensive cropping. Biosolids application could enhance the benefits of no-till or minimum tillage by improving soil cover and soil physical characteristics when surface applied. Biosolids could work in concert with crop residues to allow farmers to meet the Natural Resource Conservation Service 30% soil coverage required to comply with conservation programs.

Biosolids application could initially supply soil cover until adequate crop residue can accumulate. Continued additions may even provide production and economic advantages. Farmers may eventually use biosolids as an integral part of a conservation program. Because of continuing droughty conditions, beginning in Fall 2005, we changed our crop rotations. We
eliminated the wheat-wheat-corn-sunflower-fallow (WWCSF) and converted those plots to our other two rotations (wheat-fallow, WF and wheat-corn-fallow, WCF). This increased our replications for WF and WCF from two to four, providing us with a more robust statistical analysis of the effects of these two rotations.

B. Objectives

Our objectives at the Byers site are:

1. To determine if increasing biosolids application from once every two years to two out of three years is a feasible management alternative.

2. To determine if biosolids behave like crop residues in terms of moisture storage and crop production. Available-water storage and crop yields are the properties of greatest interest.

3. To determine the effects of biosolids application at the agronomic rate compared with commercial N fertilizer in two cropping systems on soil and grain accumulation of plant nutrients and trace elements limited by the Colorado Department of Public Health and Environment biosolids-application regulations.

C. Procedures

Treatments:

1. Two crop rotations:
   a. Wheat-fallow (typical rotation)
   b. Wheat-corn-fallow

2. Biosolids/fertilizer treatments:
   a. Biosolids application to supply N recommended for the measured soil NO$_3$-N (e.g., the agronomic rate).
   b. Commercial N fertilizer at the agronomic rate.
D. Experimental design

We now use four blocks (replications) of each treatment arranged in a split-plot design. The main plots will consist of the cropping rotations. Each main plot will be split to accommodate biosolids application on half the plot and commercial fertilizer addition on the other half.

All phases of each rotation will be present each year to allow assessment of all soil and crop responses each year. This requires a total of 20 main plots and 40 split plots (4 replications, 5 cropping rotations, biosolids/fertilizer treatment splits).

Each main plot will be 0.8 km (0.5 miles) long by 30 m (100 feet) wide. Each biosolids/fertilizer split would, therefore, be 15 m (50 feet) wide.

E. Measurements

We will complete the following measurements or analyses.

1. Annual grain and biomass yields.
2. Records on farmer inputs.
3. Plant-available concentrations of NO$_3$-N, P, K, Fe, Mn, Cu, Zn, Na, Cd, Cr, Pb, Mo, Ni, Ba, Be, and Mn in soil before each crop planting (determined in 0-5, 5-10, 10-20, and 20-30 cm samples from each replicated plot).
4. We will composite 0-5-cm soil samples for As, Hg, and Se analyses for each replication before each crop planting. This will give us 14 soil samples to analyze for As, Hg, and Se each year.
5. Deep soil sampling before each crop planting by hydraulic probe for NO$_3$-N (determined 0-30, 30-60, 60-90, 90-120, 120-150, 150-180 cm samples, if possible, from each replicated plot).
6. Concentrations of P, K, Fe, Mn, Cu, Zn, Na, Cd, Cr, Pb, Mo, Ni, Ba, Be, and Mn in grain sampled from each replicated plot.
7. For annual As, Hg, and Se grain analyses, we will composite grain samples for each biosolids or N fertilizer replication for each type of crop. This scheme will provide us with four wheat and two corn samples for As, Hg, and Se analyses each year.

COUNCIL GOAL AND PREVIOUS COUNCIL ACTION

City Council previously discussed leasing self contained breathing apparatus (SCBA) equipment, police tactical vests, and a voice over internet protocol (VOIP), telephone system at the 2009 Budget Retreat.

On May 8, 2009, City Council passed on final reading Ordinance 20, Series of 2009 which approved the lease-purchase of equipment for various City of Englewood departments.

RECOMMENDED ACTION

Staff recommends that City Council approve the attached bill for an emergency ordinance amending Ordinance 20, Series of 2009.

BACKGROUND, ANALYSIS, AND ALTERNATIVES IDENTIFIED

The original bill for an ordinance included equipment for lease-purchase that was subsequently funded by other sources or the projects were abandoned leaving only information technology-related equipment subject to lease-purchase.

This bill for an emergency ordinance amends the Ordinance 20, Series of 2009 but still allows the City to lease-purchase needed information technology equipment and conserves its capital and takes advantage of low interest rates.

This bill is presented to City Council as an emergency to protect the City against expected interest rate changes. The City expects to close on this lease at the end of March. Moving the closing up will insure estimated interest rates are preserved at their relatively low level.
FINANCIAL IMPACT

This action preserves a low interest rate not to exceed 4.75 percent. The annual principal and interest payments over the term of the lease will not exceed $128,000. The total principal paid will not exceed $350,000 and will not extend beyond calendar year 2013.

COUNCIL GOAL AND PREVIOUS COUNCIL ACTION

Striving to promote regional cooperation, City Council has approved fleet maintenance agreements with the City of Sheridan since 1993.

RECOMMENDED ACTION

Staff recommends Council approve a bill for an ordinance authorizing the Mayor to sign a four-year Intergovernmental Agreement (IGA) with the City of Sheridan for the provision of vehicle maintenance services.

BACKGROUND, ANALYSIS, AND ALTERNATIVES IDENTIFIED

The City of Englewood has been servicing the City of Sheridan’s vehicles since 1993. Sheridan has been satisfied with the services provided by the City and is interested in continuing our working relationship at the hourly rate of $68, which is the same rate charged to the City of Cherry Hills Village. The IGA allows for adjusting the hourly rate each year.

FINANCIAL IMPACT

From 1993 through 2009, the Servicenter Garage has taken on the additional workload of servicing Sheridan’s fleet vehicles. This has been accomplished without adding additional staff. The hourly rate of $68, plus a 30% mark up on parts, will cover the City’s expenses for services performed. It is estimated that, in 2010, the City of Englewood will realize revenue in the amount of $80,000.

COUNCIL COMMUNICATION

Date: March 22, 2010
Agenda Item: 11 c i
Subject: City of Cherry Hills Village Fleet Maintenance Agreement

Initiated By: Public Works Department
Staff Source: Pat White, Fleet Manager

COUNCIL GOAL AND PREVIOUS COUNCIL ACTION

Striving to promote a cooperative environment with intergovernmental agencies, City Council has approved fleet maintenance agreements with the City of Cherry Hills Village since 2003.

RECOMMENDED ACTION

Staff seeks Council approval, by motion, authorizing the City Manager to sign an extension to the agreement with the City of Cherry Hills Village for the provision of vehicle maintenance services in 2010.

BACKGROUND, ANALYSIS, AND ALTERNATIVES IDENTIFIED

The City of Englewood has provided fleet maintenance services for Cherry Hills Village since 2003. For 2010, the City will perform fleet maintenance at a rate of $68 per hour, which is the same rate we charge the City of Sheridan.

FINANCIAL IMPACT

The hourly rate of $68 per hour, plus a 30% mark up on parts, will cover all expenses incurred by the City of Englewood. It is estimated that, in 2010, the City of Englewood will realize revenue in the amount of $70,000.

COUNCIL GOAL AND PREVIOUS COUNCIL ACTION

Council approved Ordinance No. 36, Series 1997 creating a Concrete Utility and Concrete Utility Enterprise Fund (EMC Chapter 8, Title 12) on May 5, 1997.

On June 4, 2007, Council approved a motion awarding the “Concrete Utility 2007” contract to Thouft Brothers Concrete Contractors, Inc. The 2007 contract contained a provision to extend the contract for up to three additional years.

On March 17, 2008, Council approved a motion extending Thouft Brothers contract for the 2008 Concrete Utility.

On March 2, 2009, Council approved a motion extending the Thouft Brothers contract for the 2009 Concrete Utility.

RECOMMENDED ACTION

Staff recommends that City Council approve, by motion, an extension of the 2007 construction contract for Concrete Utility 2010 in the amount of $279,830 to Thouft Brothers Concrete Contractors, Inc., and authorizing the Director of Public Works to execute the contract. This award will be the third year of that extension.

BACKGROUND, ANALYSIS, AND ALTERNATIVES IDENTIFIED

Section 11-3B-1 of the Municipal Code specifies that it is the responsibility of every property owner to maintain the concrete curbs, gutters, and sidewalks adjacent to their property. An option available to property owners is to participate in the Concrete Utility. The Concrete Utility provides a funding mechanism for concrete repair at a reasonable cost ($7.96 per quarter for a typical residential property) and a convenient way to pay (96% of the fees are collected through the water/sewer billing system). The City contributes its share of the fees just like any private owner.

Thouft Brothers Concrete Contractors, Inc. has submitted unit prices for 2010 that are identical to the 2009 prices (0% increase). Staff has researched concrete prices in the Denver Metro area and finds the proposed 0% increase favorable to the City. Thouft Brothers was low bidder for similar 2010 concrete removal and replacement projects with the City of Arvada and Douglas County. Nationally, cement
prices are up 0.2% and construction labor costs up 2.9% (statistics per March, 2010 Engineering News Record). With Council approval, the City will be able to take advantage of quality work and favorable prices.

Concrete Utility 2010 is scheduled for construction during the spring and summer of 2010.

FINANCIAL IMPACT

B. **Scope of Work:** The Contractor agrees to and shall furnish all labor, tools, supplies, equipment, materials and everything necessary for and required to do, perform and complete all the work described, drawn, set forth, shown and included in said Contract Documents.
